

Manual for PnP IP Camera

-----IPCameraV

This user manual applies to all the PnP IP Cameras below:

IPA Series: Home Pan-tilt IP Cameras

IPB Series: Outdoor Waterproof IP Cameras

IPC Series: Fixed Dome IP Cameras

NOTICE:

1. Please use the POWER ADAPTER and other accessories coming with camera!
2. Please change the password after the first login, and please REMEMBER your CHANGED PASSWORD!

Thank you for reading this user manual, if any problems you find out, please kindly inform us!

1. Hardware Installation

Please connect camera to the Internet like the following way:

Use the correct power supply for camera, and connect it to router or switch.

Note: Please check whether the working status of “Power Light” and “Network Light” is same with the following description, if not, please reconnect the power adaptor and network cable again.

(1) IPA Series Camera Interface Introduction:

(2) IPB and IPC Series Camera Interface Introduction:

Definition	Description
Power Indicator	Orange color, it is always on when device is powered and network cable is connected correctly
Data Indicator	Green color, it is blinking when data is transmitting

2. Software Installation

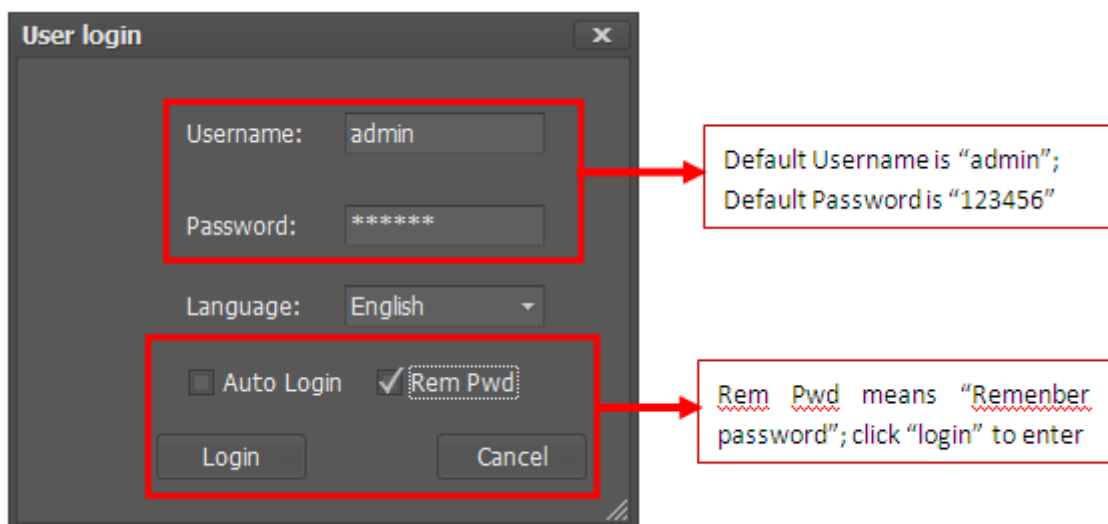

Insert the CD into CD driver of your PC and find out the folder “2. PC Monitoring Client Software” and install the software. After finishing installation, the icon like below will display on your desktop

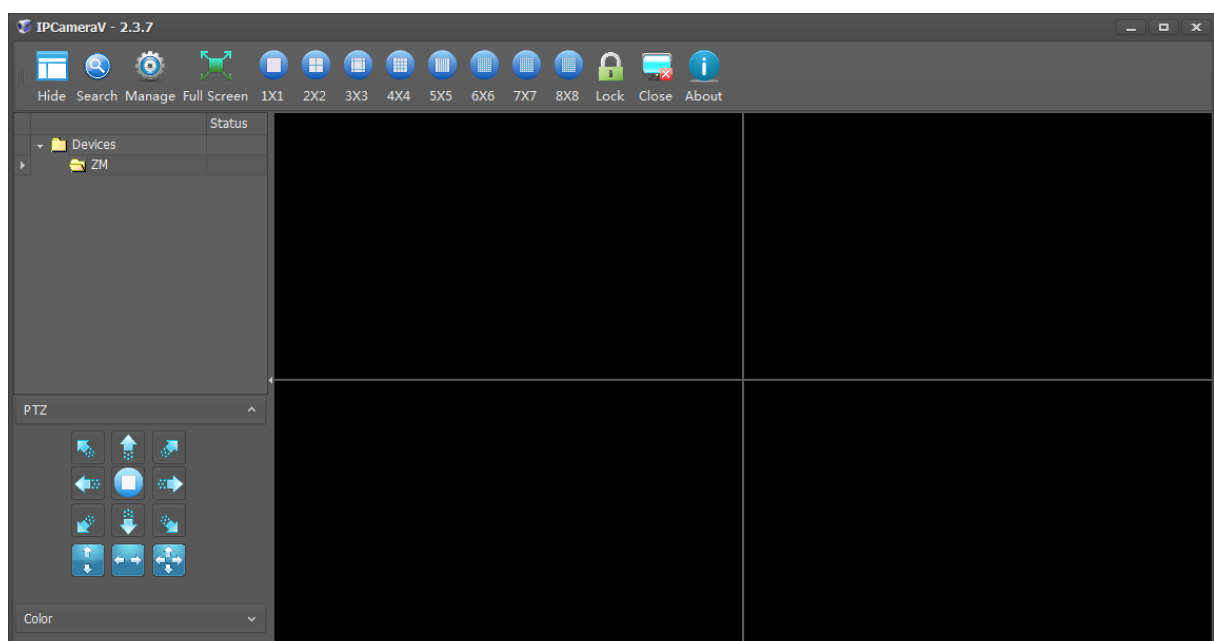

3. Access to Camera

3.1 Login IP Camera Client

(1) Double click the icon to login in; you will see the following interface

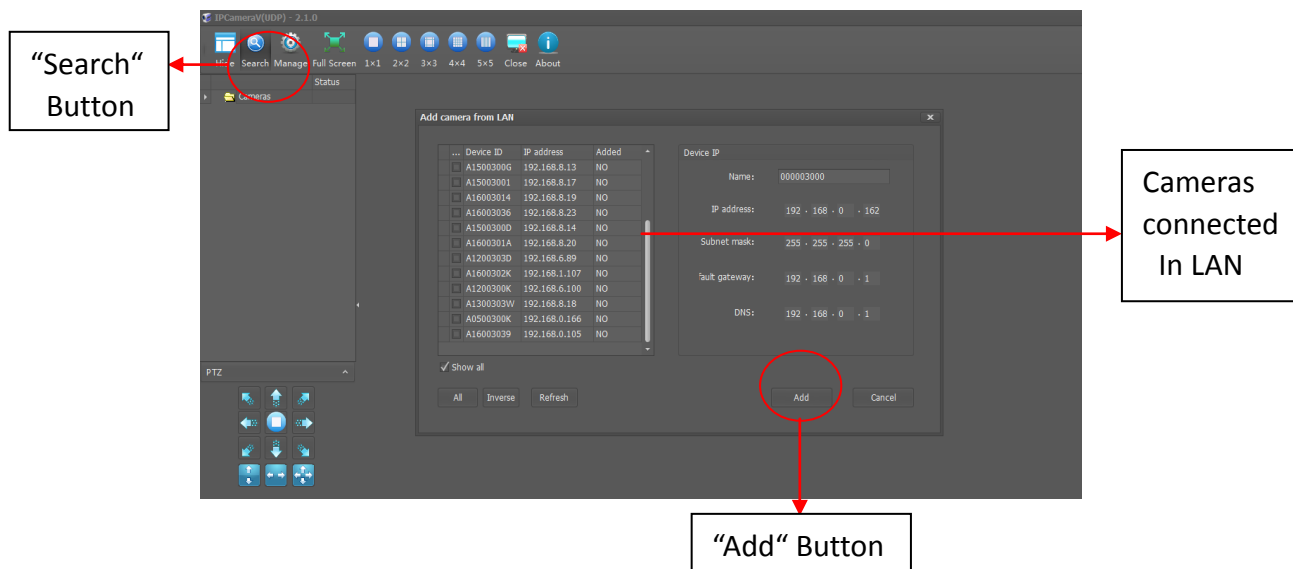

(2) After click “Login”, you will see the client interface as below:

3.2 Adding IP Camera Device

3.2.1 Using “Search” Function

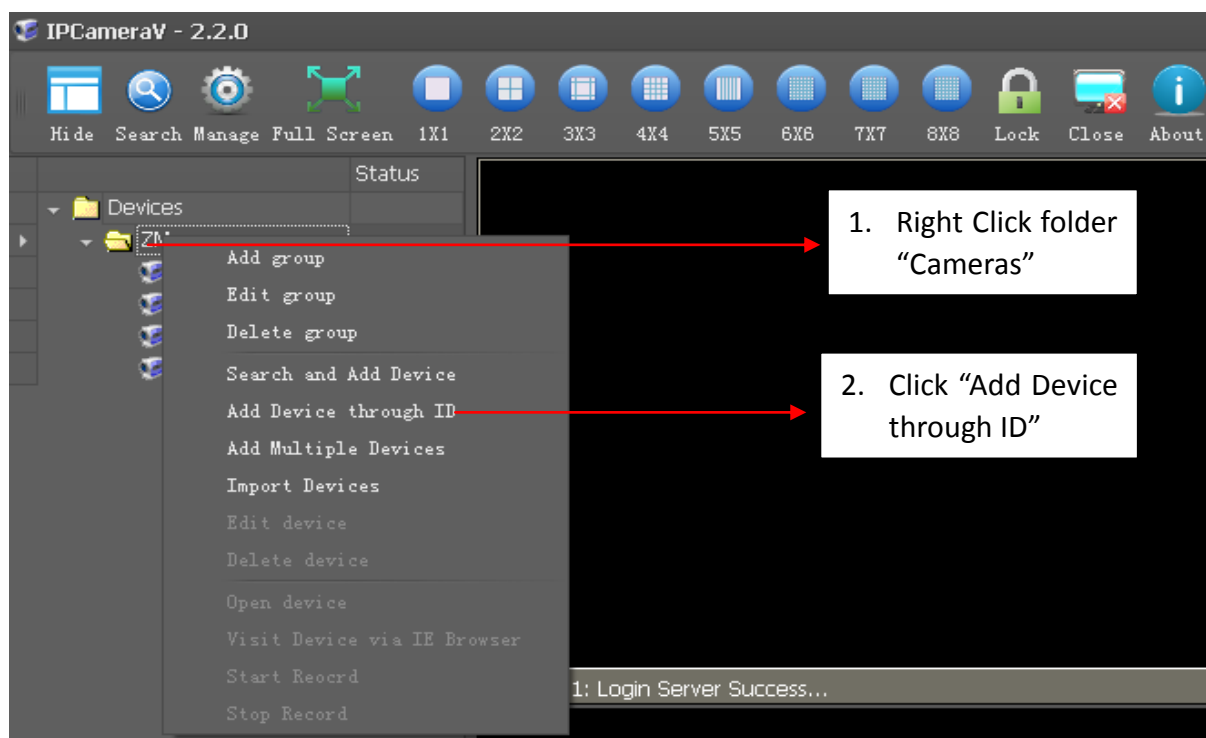

(1). Click “search”, the cameras connected to LAN will be shown in the list:

(2). Select the camera and click “Add”. The camera will be added into the folder “Cameras” on the camera list on the left side;

3.2.2 Using Context Menu

You can use this function to add the cameras in LAN or WLAN

Add camera wizard - No. 1 step Total2step

Description

Name:

Description:

上一步 Next Finished Cancel

3. Fill in a name of the camera and any information you want to describe camera

4. Click "Next"

Add camera wizard - No. 2 step Total2step

Camera setup

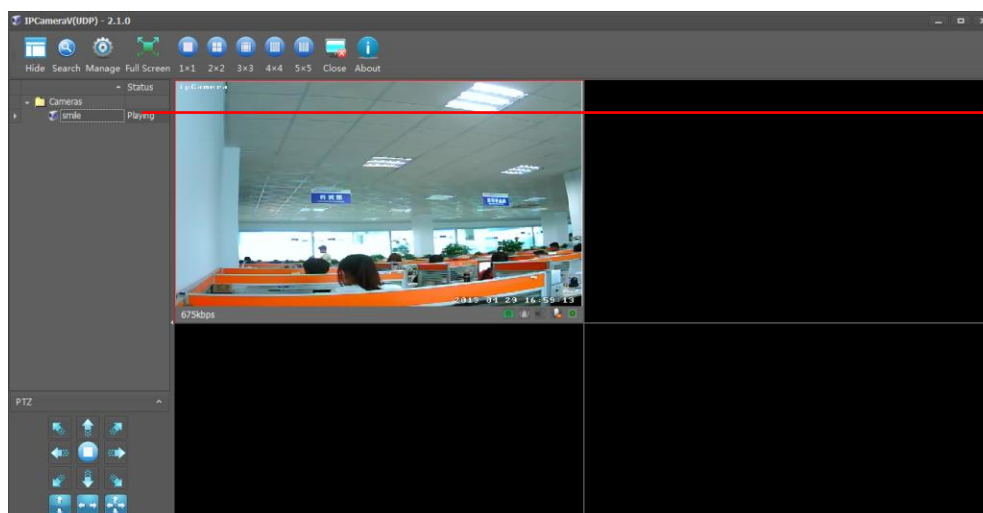

Device ID:

Device Password:

上一步 Next Finished Cancel

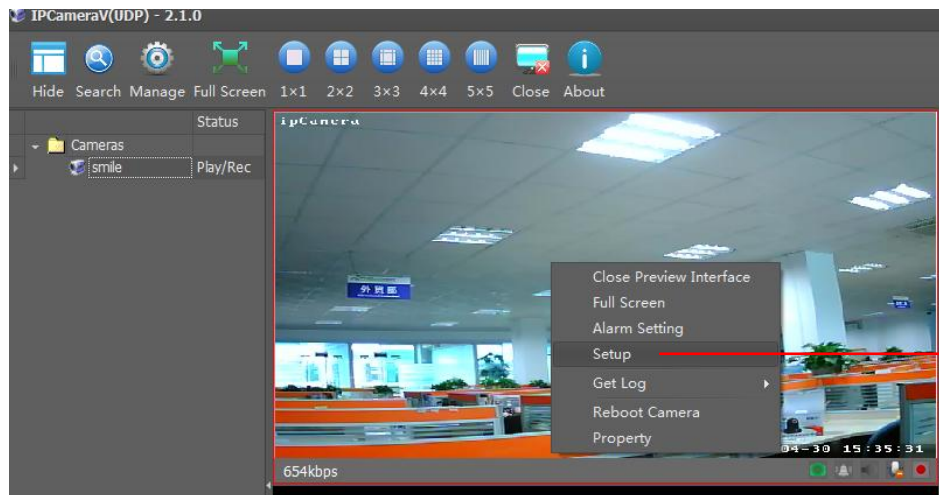

5. Fill in Device ID and Password

6. Click "Finished"

7. Double click the camera added under the folder of "Cameras", you will see the video successfully

4. WIFI Setting

1. Select the video of the camera you want to set WIFI, right click the mouse, and click "Setup"

2. Click "WIFI"

5. Input the WIFI password and Connect it

4. Open "WIFI switch" and Click "search"

3. Open "WIFI switch" and Click "search"

5. Record, Snapshot and Two way Audio

5.1 Operation of alarm, snapshot and two way audio

Snapshot: Click to capture the current camera image

Alarm: When alarm triggered, the “Alarm” button will turn RED.

Listen-in: Click “Listen-in” button to hear sound around the camera.

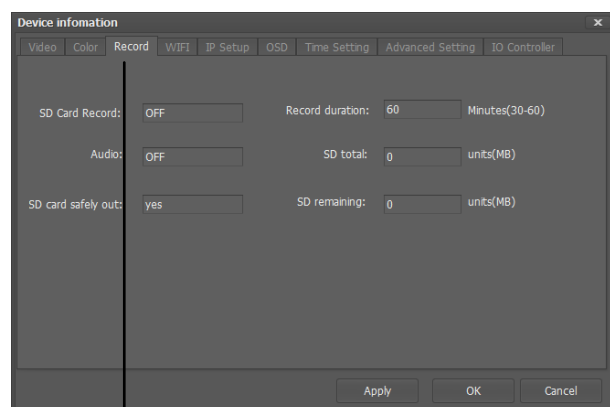

Talk Back: Collect voice around you and transmit to the camera side

Recording: Record the video manually

5.2 Record onto SD Card

1. Right click the screen and select “setup”

2. Select the “Record” tag, to setup SD Card record Parameters

5.3 Schedule Record

1. Click "Manage"

2. Click "Record Manage"

3. Click "Schedule Record"

4. Select Camera

5. Set the schedule of recording, red square means the camera will record video at this selected time

6. Click "Save" to save the schedule

7. Click "Change" to set video saving path

8. Click "Setting" to set record duration of time, for example, when set 20, every video file will be 20 minutes

5.4 Setting Picture and video file path

1. Click "Mange"

2. Click "General"

3. Click "Save" to set snapshot saving path

4. Click "Save" to set video save path

6. Playback Video

6.1 Playback Video Recorded onto Local Computer

1. Click "Manage"
2. Set start time and end time, and then click "Search"
1. Click "Record onto Computer"
4. The video recorded during the selected time will be shown up, click "Play" to playback the video

Device	File name	Path	Size	Play
192.168.0.177	203508.avi	C:\ZMIPC Files\ZMIPC...	323034	Play

6.2 Remote Playback Video from SD Card

1. Click "Manage"
2. Click "Record onto SD Card"
3. Select Camera
4. Set start time and end time, then click "Search"
5. The video recorded during the selected time will be shown up, click "Download", after the video is downloaded completely, and click "Play" to playback the video

Device	Local path	file name	Time	Scheduler	Download	Play
192.168.0.180	C:\ZMIPC Files...	081752.avi	2013-01-07 08:17:52	100%	Download	Play
192.168.0.180	C:\ZMIPC Files...	083408.avi	2013-01-07 08:34:08	9%	Download	Play
192.168.0.180	C:\ZMIPC Files...	085024.avi	2013-01-07 08:50:24	0%	Download	Play

7. Alarm Setting

7.1 Alarm Introduction

Alarm Setting includes “**Alarm Source**” and “**Alarm Strategy**”. Alarm Source means what will trigger alarm. Alarm Strategy means how the camera will notify alarm.

Alarm Source:

Motion Detection: Alarm will be triggered when the camera detects the motion object.

I/O Input Detection: Alarm will be triggered when the I/O Input detects low-level voltage signal.

Alarm Strategy: (Except Alarm Email, the other strategies in the following is valid only when SD card is available)

Alarm Email: Camera sends email (including snapshot and event) to the preset email address when alarm is triggered.

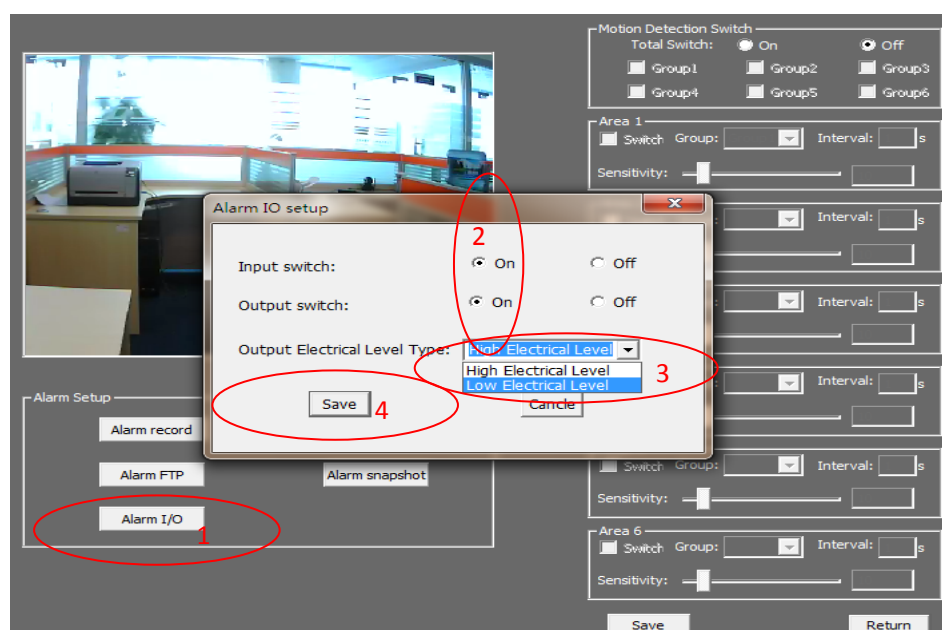

Alarm FTP: Camera sends pictures to preset FTP server when alarm is triggered.

Alarm Record: Camera records video onto SD Card when alarm is triggered.

Alarm Snapshot: Camera snapshots and save to SD Card when alarm triggered.

7.2 Alarm I/O Description:

Click “Alarm I/O” to set I/O input detection and I/O output voltage level. When I/O input is enabled, low-level voltage will trigger alarm. Alarm I/O output is high-level voltage and low-level voltage optional.

7.3 Motion Detection Description

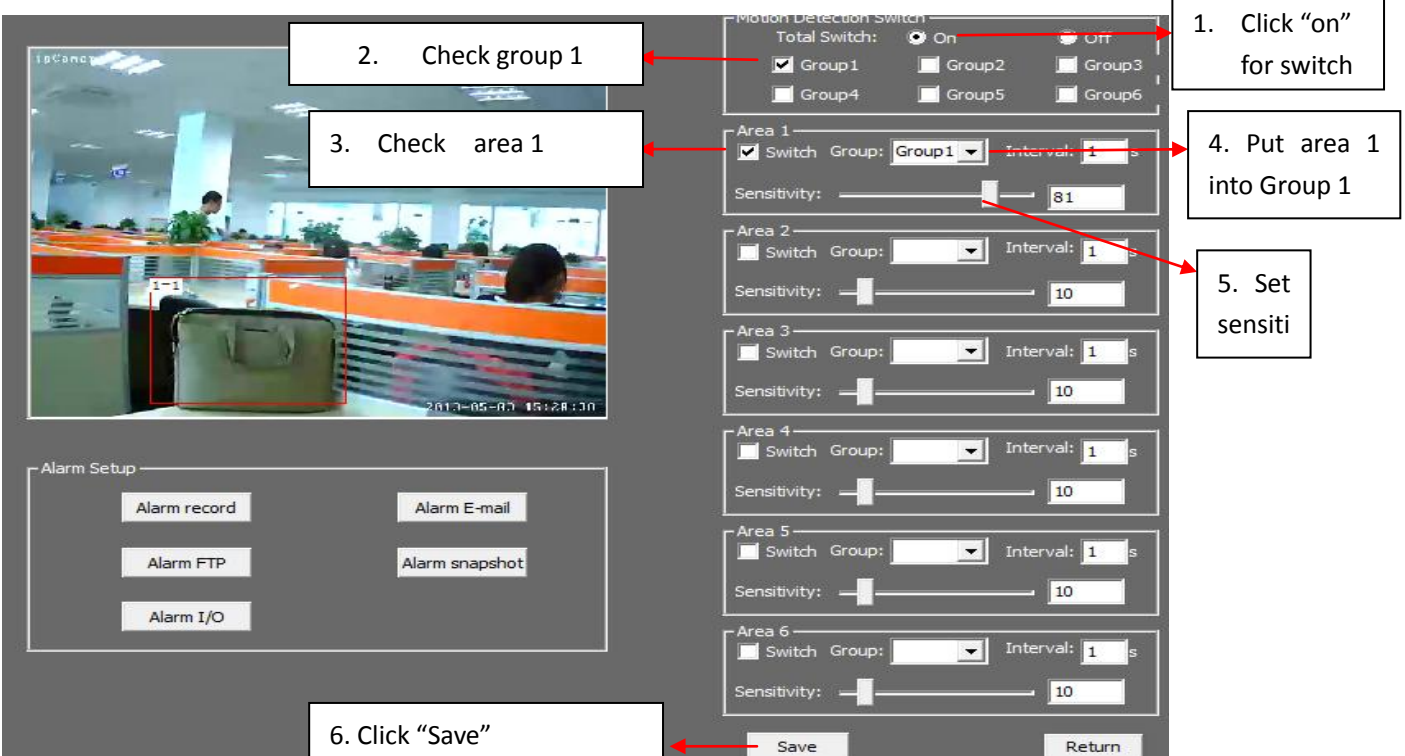

The Motion Detection function of our cameras is much more intelligent and flexible. The special designed **“Six Areas Linkage Control”** System greatly reduces the false alarm.

The actualizing form of Motion Detection consists of Group, Area, Sensitivity, and Interval.

Item	Description
Group	User can set SIX groups alarms at most
Area	User can set SIX areas for an alarm, only when SIX areas are all triggered, the alarm will be triggered. Such is “Six Areas Linkage Control” System. Comparing with ONE area triggered system, this system greatly reduces the false alarm. Note: One group supports Six areas at most; user can set 1-6 areas according to different requirement.
Sensitivity	The sensitivity of motion detection, the smaller value is, the higher sensitivity is. High sensitivity means alarm is triggered easily.
Interval	The interval of time between the current area and the previous area
 Meaning of number	The first “1” means the number of area (6 areas at most), the second “1” means group (6 groups at most). 1-1 means the first area of the first group

Application 1: One area trigger:

For example: When the bag is moved, the alarm is triggered.

The screenshot shows the 'Motion Detection Switch' configuration window. On the left is a video feed of a bag on a desk with a red box labeled '1-1' around it. On the right are settings for six areas. Numbered callouts indicate the following steps:

- Click "on" for switch (points to the 'Total Switch' radio button).
- Check group 1 (points to the 'Group1' checkbox).
- Check area 1 (points to the 'Area 1' checkbox).
- Put area 1 into Group 1 (points to the 'Group' dropdown menu for Area 1).
- Set sensitivity (points to the 'Sensitivity' slider for Area 1).
- Click "Save" (points to the 'Save' button at the bottom).

At the bottom left, there is an 'Alarm Setup' section with buttons for 'Alarm record', 'Alarm E-mail', 'Alarm FTP', 'Alarm snapshot', and 'Alarm I/O'.

Application 2: Several areas trigger:

For example: Only when a person is getting in door, the alarm is triggered. If only a dog (or some other little animal) is getting in the door, the alarm will be not triggered, as the dog can't trigger THREE areas at the same time. (This system greatly reduces false alarm)

The screenshot shows the 'Alarm Setup' window. On the left, a 3D scene shows a person and a dog in a doorway, with three red rectangular areas labeled 'Area 1', 'Area 2', and 'Area 3' overlaid. On the right, the 'Motion Detection Switch' section has a 'Total Switch' set to 'On'. Below it, 'Group 1' is checked. The 'Area' settings for Area 1, 2, and 3 are all set to 'Group 1' with intervals of 1, 0, and 0 seconds respectively. Sensitivity sliders are set to 50, 45, and 48. Area 4 and 5 are set to 'Group' (empty) with intervals of 1 and 1 seconds, and sensitivity of 10. Area 6 is also set to 'Group' (empty) with an interval of 1 second and sensitivity of 10. At the bottom, there are 'Save' and 'Return' buttons. A '7. Click "Save"' instruction points to the 'Save' button. Other instructions point to various settings: '1. Click "on" for switch' points to the 'Total Switch' toggle; '2. Check group 1' points to the 'Group 1' checkbox; '3. Check area 1' points to the 'Area 1' switch; '4. Check area 2 & area 3' points to the 'Area 2' and 'Area 3' switches; '5. Put area 1 & area 2 & area 3 into Group 1' points to the 'Group' dropdown for Area 1; '6. Set sensitivity' points to the sensitivity slider for Area 3.

2. Check group 1

3. Check area 1

4. Check area 2 & area 3

5. Put area 1 & area 2 & area 3 into Group 1

6. Set sensitivity

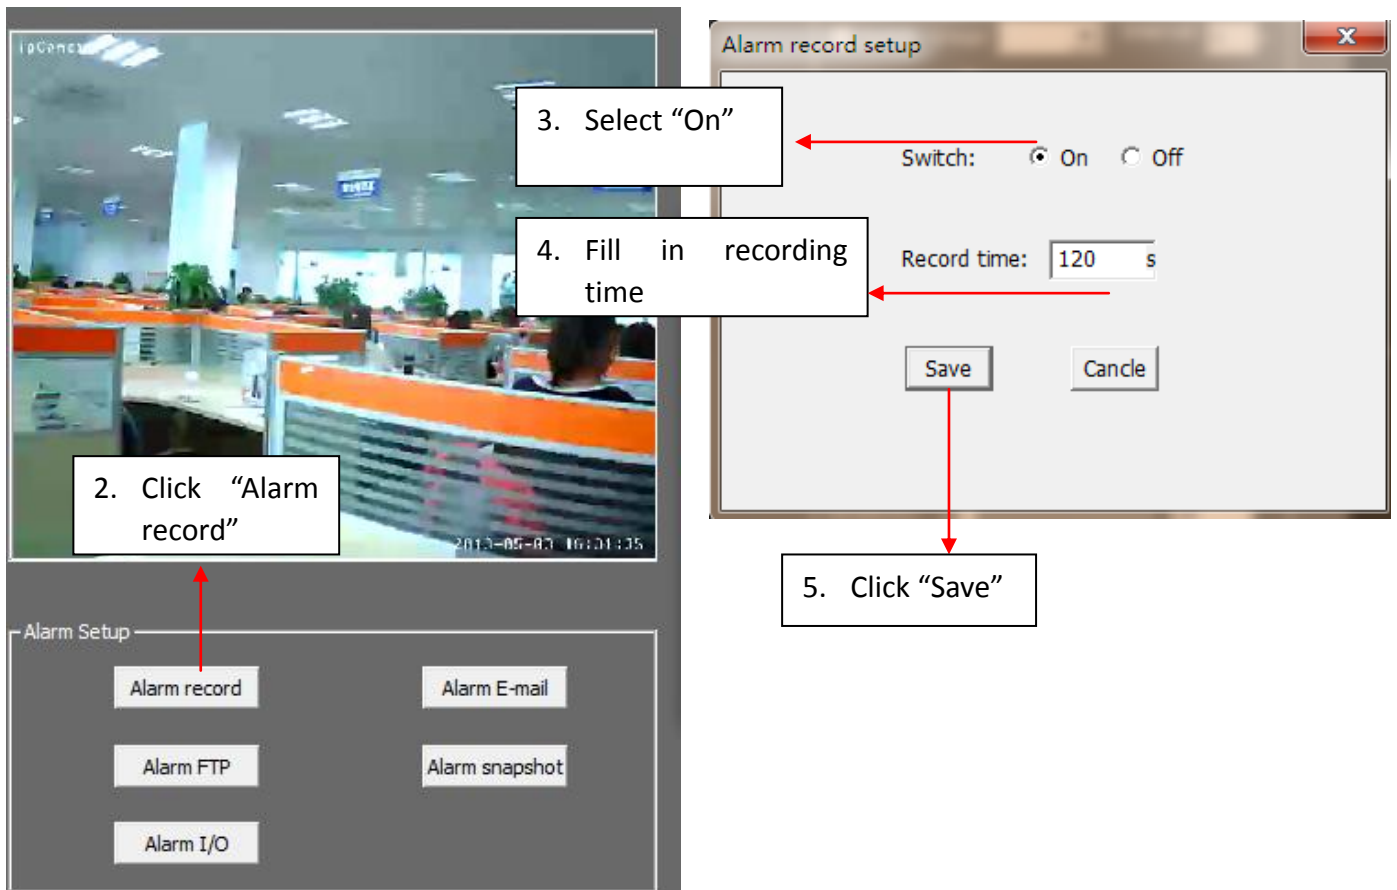

7. Click "Save"

7.4 Alarm Record:

When alarm is triggered, the camera will record video onto SD Card

The screenshot shows the 'IPCameaV(UDP) - 2.1.0' interface. On the left, a 'Cameras' list shows 'smile' as 'Playing'. The main area displays a video feed of an office interior. A context menu is open over the video, with options: 'Close Preview Interface', 'Full Screen', 'Alarm Setting', 'Setup', 'Get Log', 'Reboot Camera', and 'Property'. A red arrow points from the 'Alarm Setting' option to a text box on the right. The text box contains the instruction: '1. Select the video of the camera you want to set alarm, right click the mouse, and click "Alarm Setting"'. The video feed shows a timestamp of '2013-04-30 22:33:24' and a bitrate of '565kbps'.

1. Select the video of the camera you want to set alarm, right click the mouse, and click "Alarm Setting"

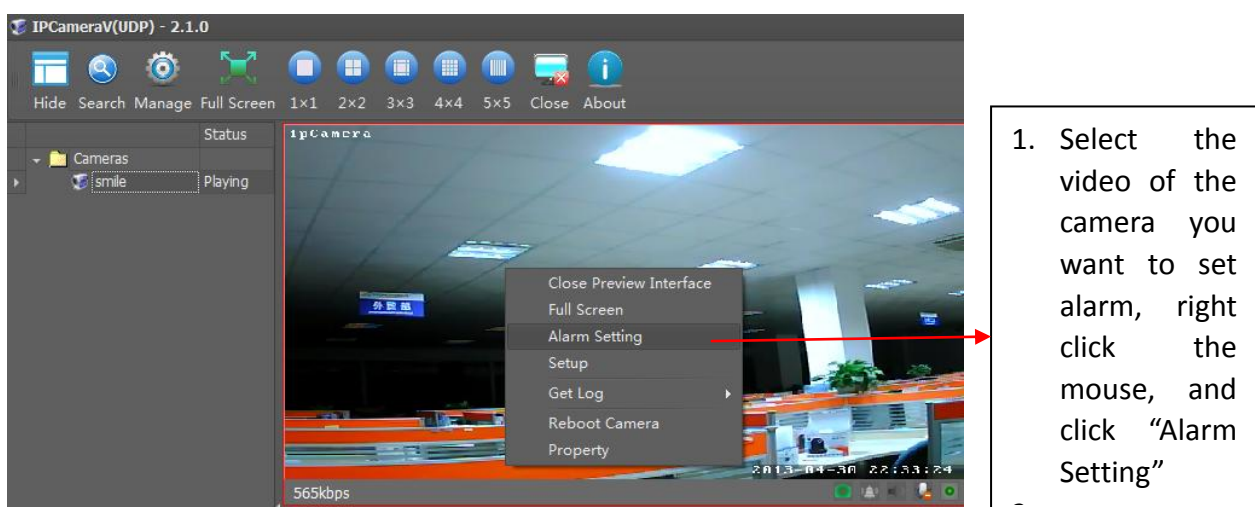

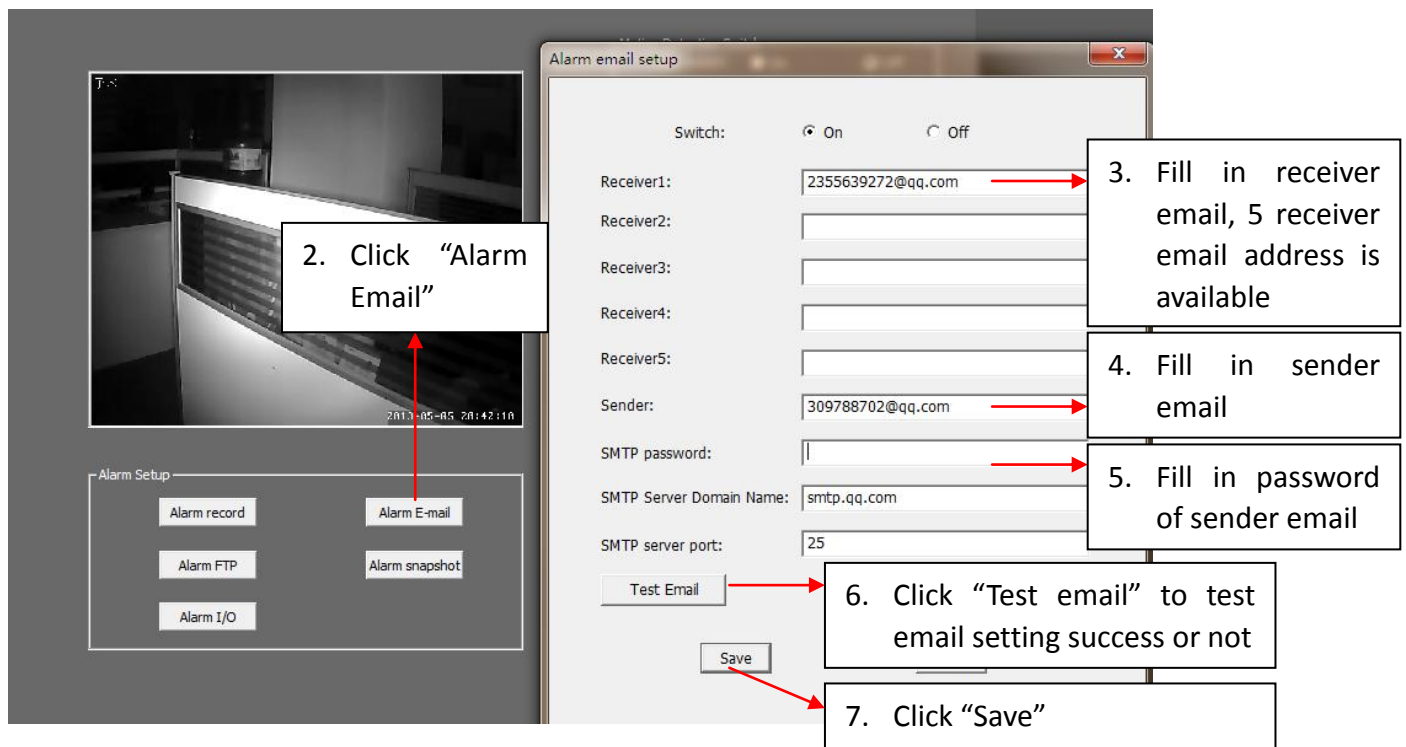

7.5 Alarm Email

When alarm is triggered, you will be notified via email

(Outlook mail, Gmail, 163mail, 126mail and Sohu mail are available)

Notice: The SMTP/IMAP function of the email should be enabled first!

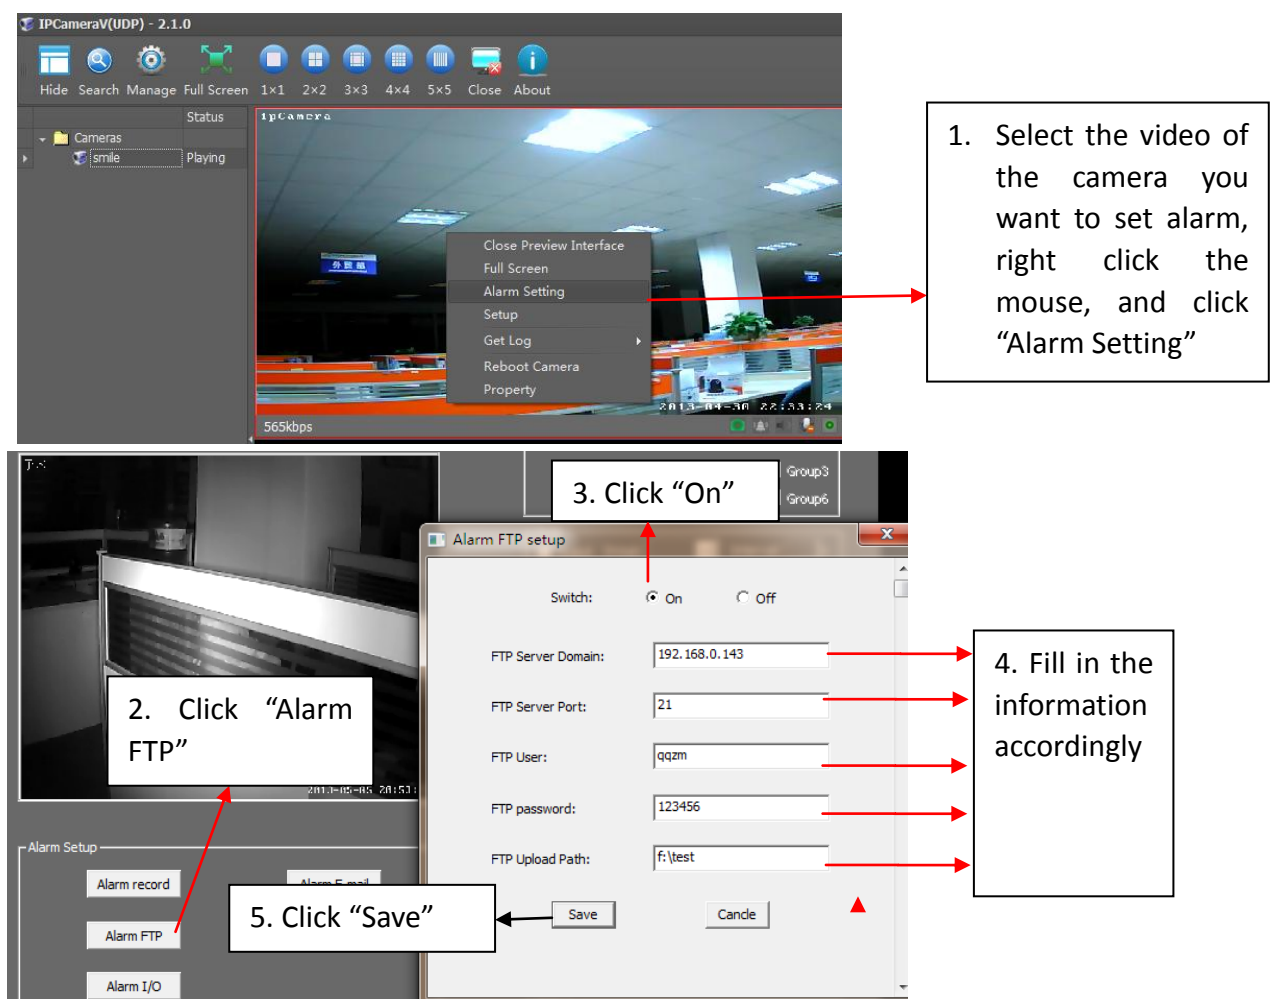

7.6 Alarm FTP

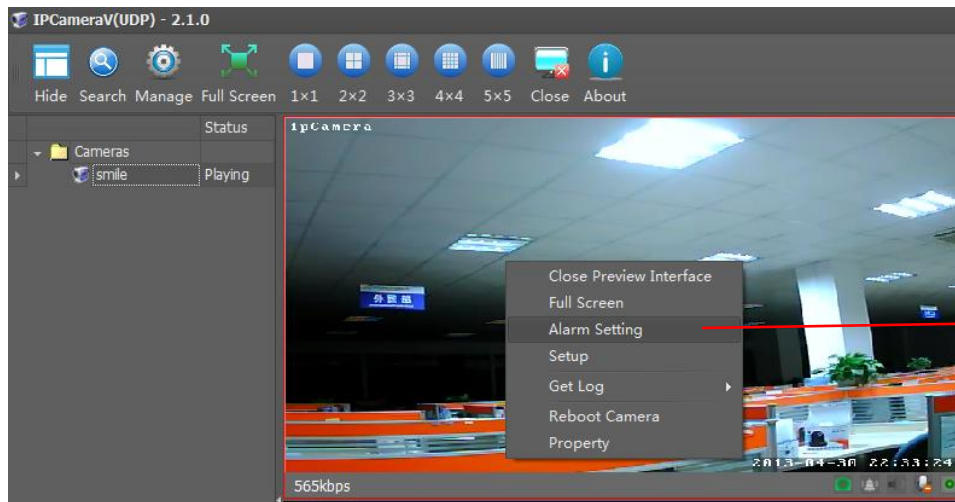

Camera sends pictures to the preset FTP server when alarm is triggered.

Notice: Please build a FTP server first!

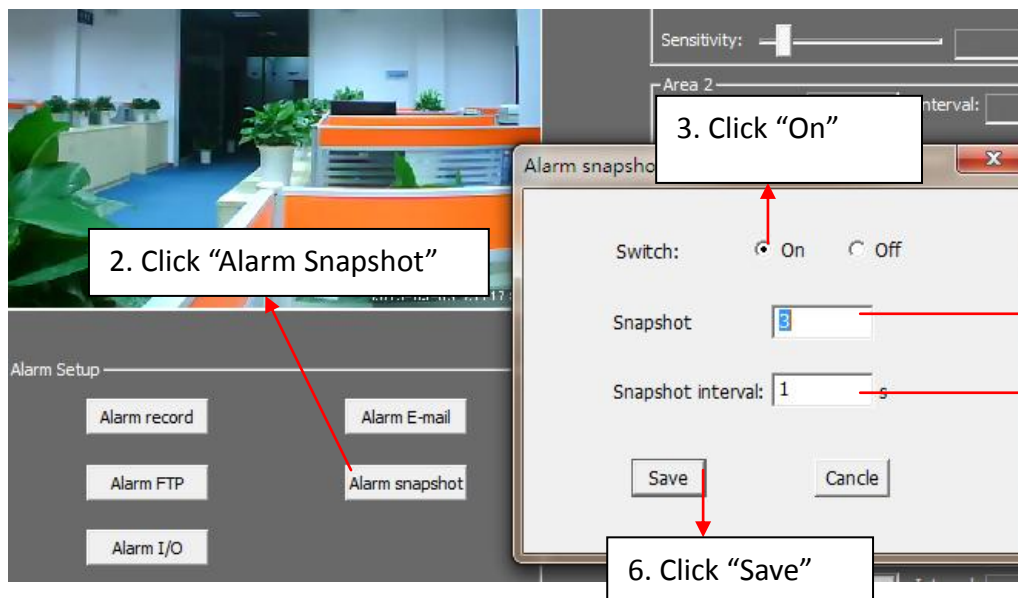

7.7 Alarm Snapshot

Camera takes snapshot and save it onto SD Card when alarm is triggered.

1. Select the video of the camera you want to set alarm, right click the mouse, and click "Alarm Setting"

2. Click "Alarm Snapshot"

3. Click "On"

4. Fill in the quantity of snapshot

5. Fill in the interval of time between two snapshots

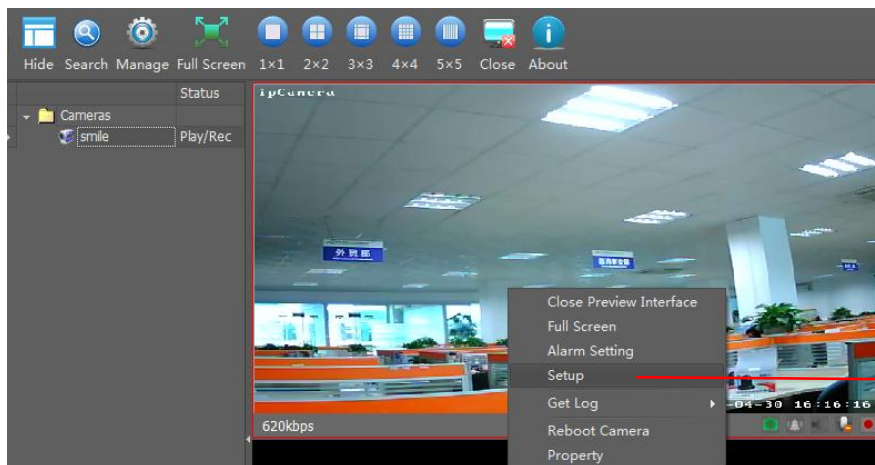

6. Click "Save"

8. Password Management

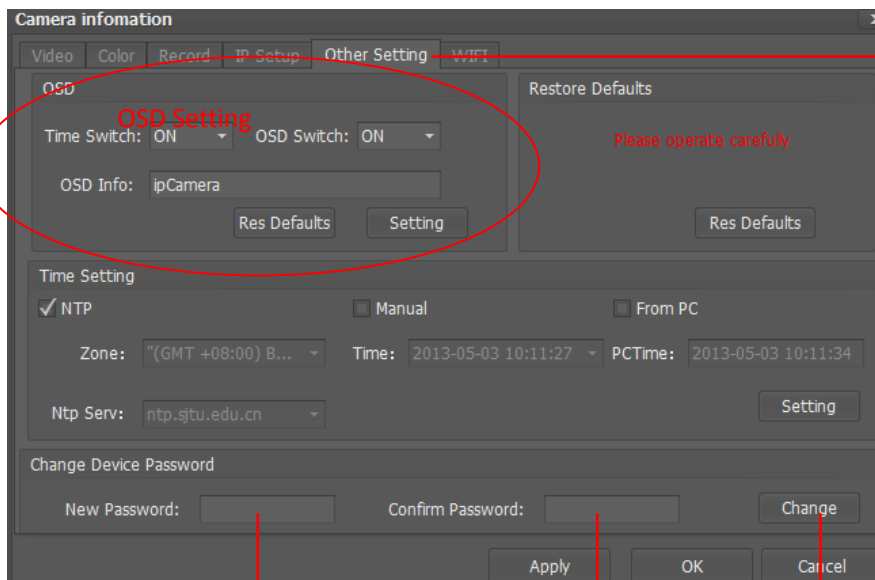

8.1 Password of Camera

Every camera has an unique ID and Password, and the ID and Password are shown on the label attached onto the camera housing. We strongly recommend user change the password after the first login.

Steps of changing camera's password:

1. Select the camera you want to change the password, then right click the mouse, and then click "Setup"

2. Click "Other Setting"

3. Fill in "New Password" & "Confirm Password" and click "Change", then click "Apply" and "OK"

If I forget my password, how can I retrieve it again?

(Please note this operation is only valid for IPA01 series Home Pan-tilt IP Cameras)

1. Push the RESET button at the BOTTOM of the housing for 5 seconds
2. Connect camera into LAN and login it (no need password at the moment)

3. Right Click the camera

4. Click "Edit Camera"

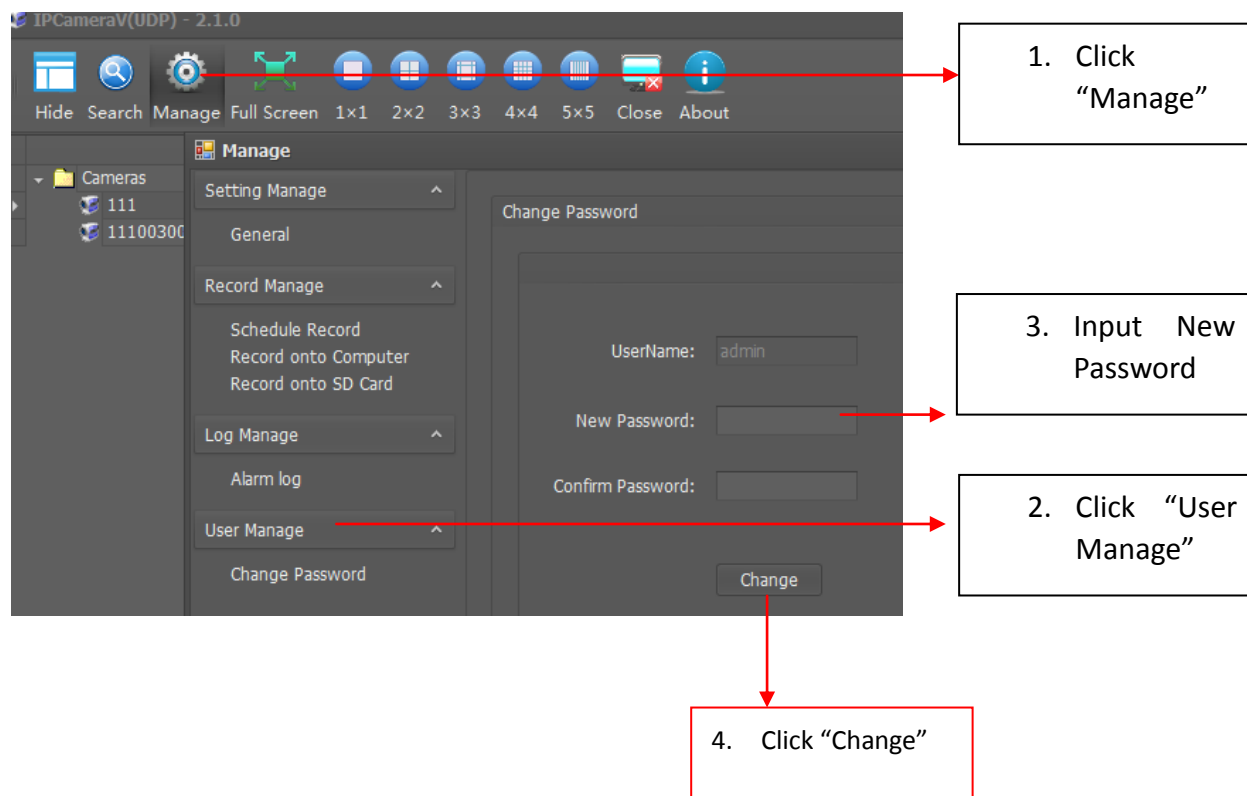

5. Click "Setup", the device ID and password will be shown up

Notice: You ONLY have ONE chance to retrieve the password, if you change the password again, the operation above will be not working again. Please contact us to retrieve your password.

8.2 Password of Client Software

The default password of the client software is “123456”, we recommend user change the password after your first login

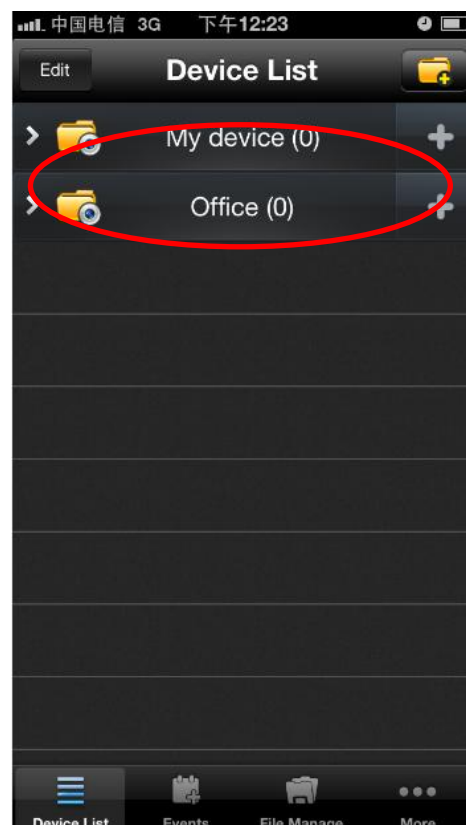

The steps of changing password of client software

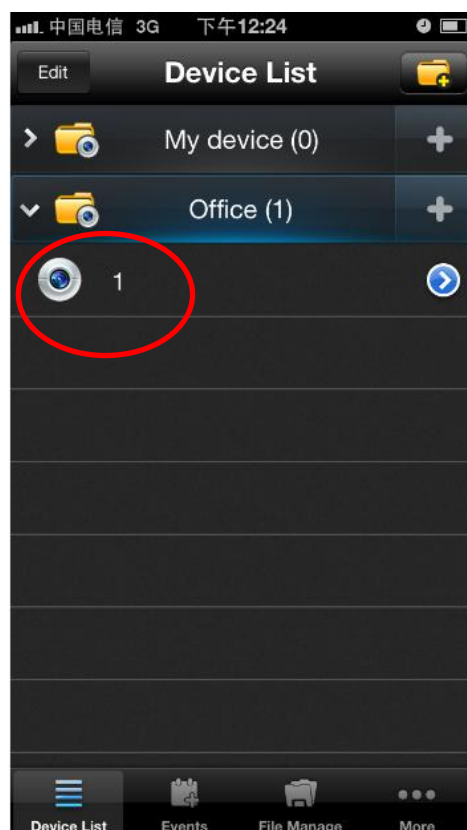

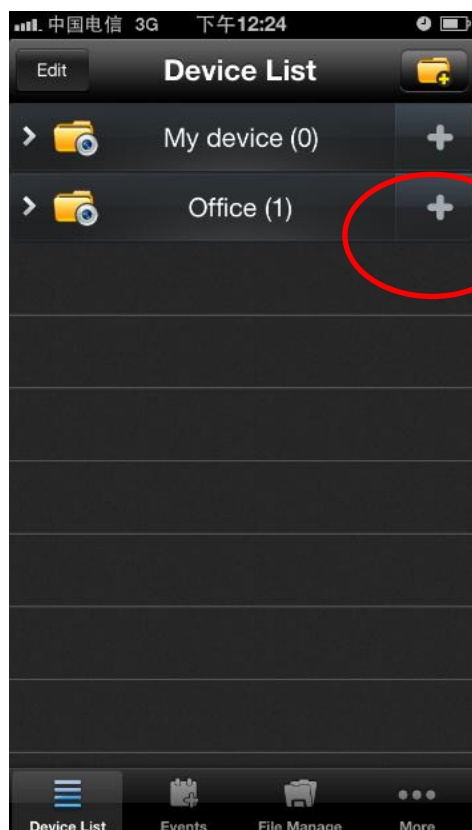

9. Visit Camera over Smart Phone

IOS System: Download “Oview” from “App Store”

Android System: input “play.google.com” into web browser and search “com.oview” or copy from CD

Click video, you will see Four arrows, click the arrow to move the monitoring area
